# **Project Topic: EduTechSkills: Empowering Teachers in IT**

## **INTRODUCTION**

‘EduTechSkills’ is a transformative training program that is designed to equip the teachers with essential IT skills and knowledge they need to thrive in today’s technology. As we know teachers are at the forefront of shaping future generation, this training aims to empower them with the knowledge and skills of IT.

This Training Will Last For A Year And We Will Train 500 Teachers From 5 Different Districts In Country , We Will Train 100 Teachers From Each District And Chosen Districts Are Nyaruguru , Ngoma , Burera, Gakenke, Nyamasheke.

During this training there will be weekly assessment that will take place every Friday and monthly assessment to see teachers progress . the training will start from Monday to Friday until the training is over expect konji days. Furthermore this training will be attended by teachers and yet teachers have to teach that is why the training will occur in holidays

## **PURPOSE OF THE PROJECT**

- > Empower Teachers In Rwanda With Essential It Skills
- > Improve Learning Outcomes
- > Ensure Quality Education

## **OBJECTIVES OF THIS PROJECT**

- > Digital Confidence
- > Equal Access (Share Same It Resources Regardless Of The Location)
- > Integration Of It Tools In Teaching Activities

### **What we learned while working on this project and how it will help us in our professional career if we are hired as project manager in the area of ICT.**

Working on this project has likely provided us with valuable insights into teamwork, project coordination and as we collaborate with group members we learnt about effective communication, delegation, and time management.

So if we are hired as project managers with these experience we can handle different things like : leading team, handling challenges, and adapting to changing circumstances planning and manage project with multiple dependencies, make informed decision about project scope, schedule and budget.

In area of ICT we can use Microsoft Project to create a project schedule for a new software development project and also plan and manage complex ICT projects ,tracking the progress of ICT projects and deliver ICT projects on time and within budget.
